Guide for Multidisciplinary Oncology Consultation

Evert Sanders

Evert Sanders,
Radiologist at Amphia Hospital Breda
User chair IHE Nederland
Member informatics-section
of the Dutch society of radiology

Integrating
the Healthcare
Enterprise

IHE-NL Working group Care Processes

In consultation with
NABON/ SONCOS
IKNL/NCR

- **Tumour board meetings (MDO):**
 - A lot of different types
 - 220.000 MDO's per year in the Netherlands
 - Regional, inter regional, national teams
 - Broad aspect of information exchange
 - A single Academic centre imports 40.000 DVD's per year
 - Only radiology/NM images!!

Collection, transporting and presentation of the information is challenging

NABON | Nationaal Borstkanker Overleg Nederland

(National Breastcancer Consultation Netherlands:
national multidisciplinary consultation body of healthcare professionals
which are involved in the diagnostics and treatment of breastcancer)

Standardising breast record

Update

Big trigger:

for 1 simple patient case they needed to type Right/Left 40 times over again!

Nabon, Workinggroup standardising reporting

Dr. J. (Janneke) Verloop,
secretaris, NABON

Dr. M. (Maud) Bessems,
chirurg-oncoloog, Jeroen Bosch
Ziekenhuis

Dr. C. (Carla) Meeuwis,
radioloog, Rijnstate Arnhem

A. Wagenvoort,
radioloog, Noordwest
Ziekenhuisgroep

Drs. L. Saes,
internist-oncoloog, Erasmus MC

Medical oncologist

Radiologist

Dr. C.P.H. (Celia) Vreuls,
patholoog, UMCU

Drs. F. (Floor) Klijn,
klinisch informaticus, IKNL

Drs. L. (Lidy) M.H. Wijers,
radioloog, Alrijne ziekenhuis

Dr. I. (Ilse) Jannink,
chirurg-oncoloog, Haga
ziekenhuis

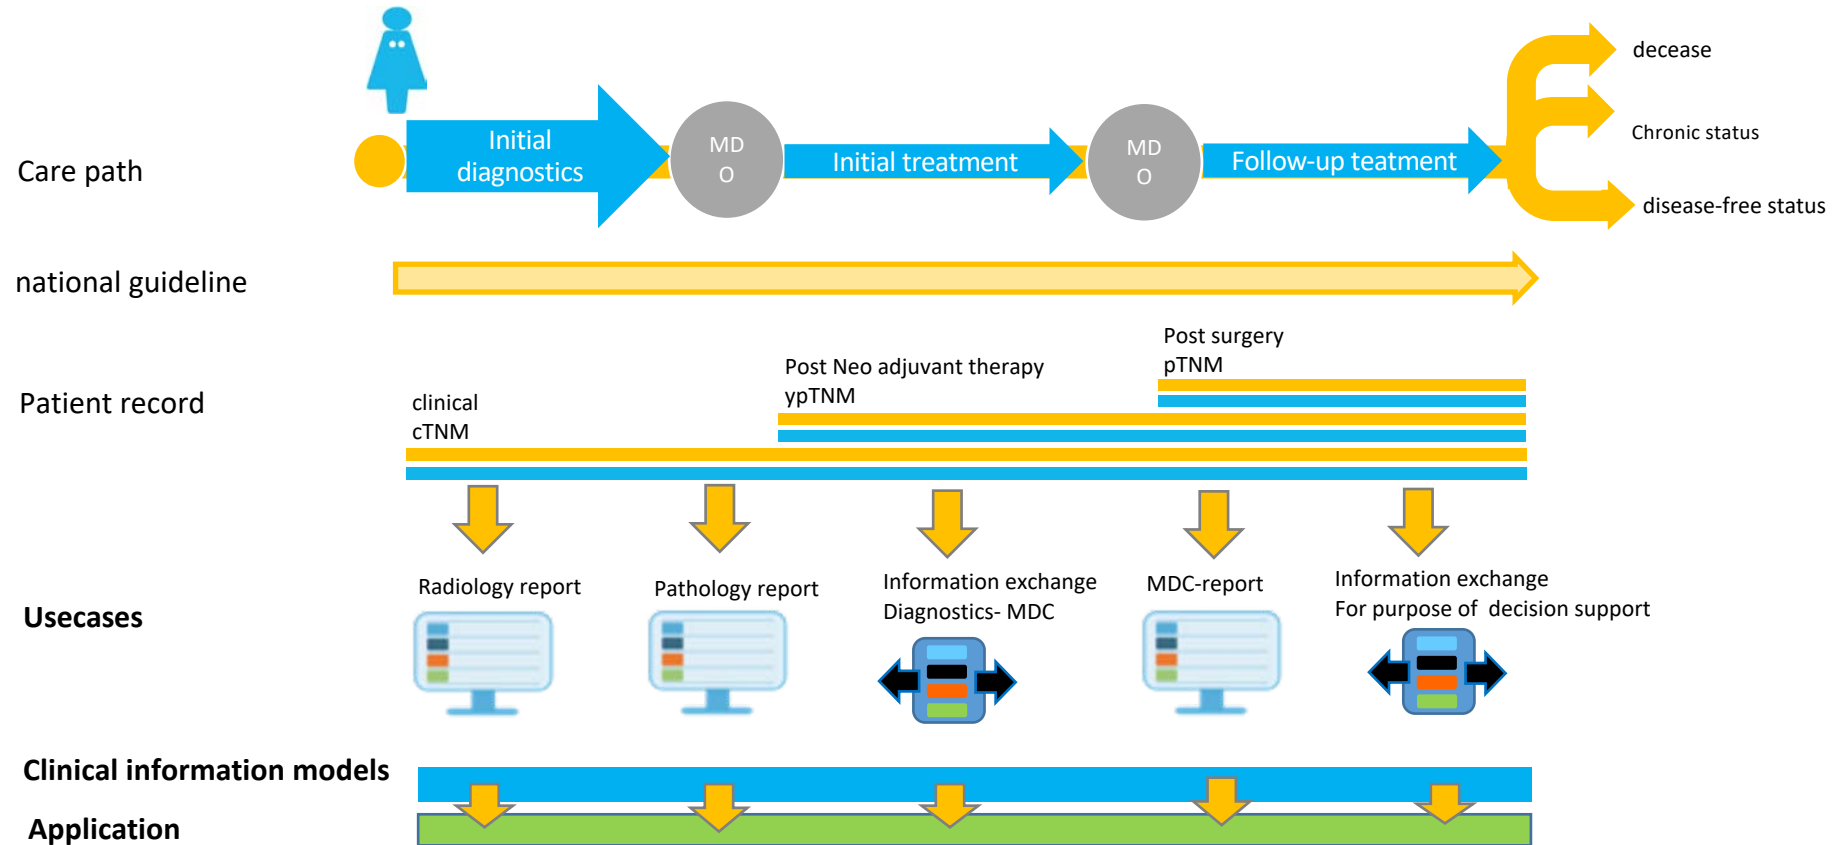

Dr. P.J. (Pieter) Westenend,
patholoog, PAL Dordrecht

Surgical oncologists

Pathologist

Clinical computer scientist

care path from information standard to practice

Major problems

semantic interoperability

Healthcare professional

technical interoperability

IT dept. / EHR vendor

New choices for Nabon

- Choose for an approach that will work for each EHR vendor instead of working in Content group for each EHR
- Ensure that their process is leading instead of the EHR vendor
- Developed guideline breast cancer - what are user triggers for implementing

Challenges:

- How to get this implemented in systems
- No knowledge to translate their guideline into technical specs for the vendors
- No resources (people and money)

to take more direction on elektronic information exchange in healthcare

MoH organised consultations for choosing the priorities

Started in 2018

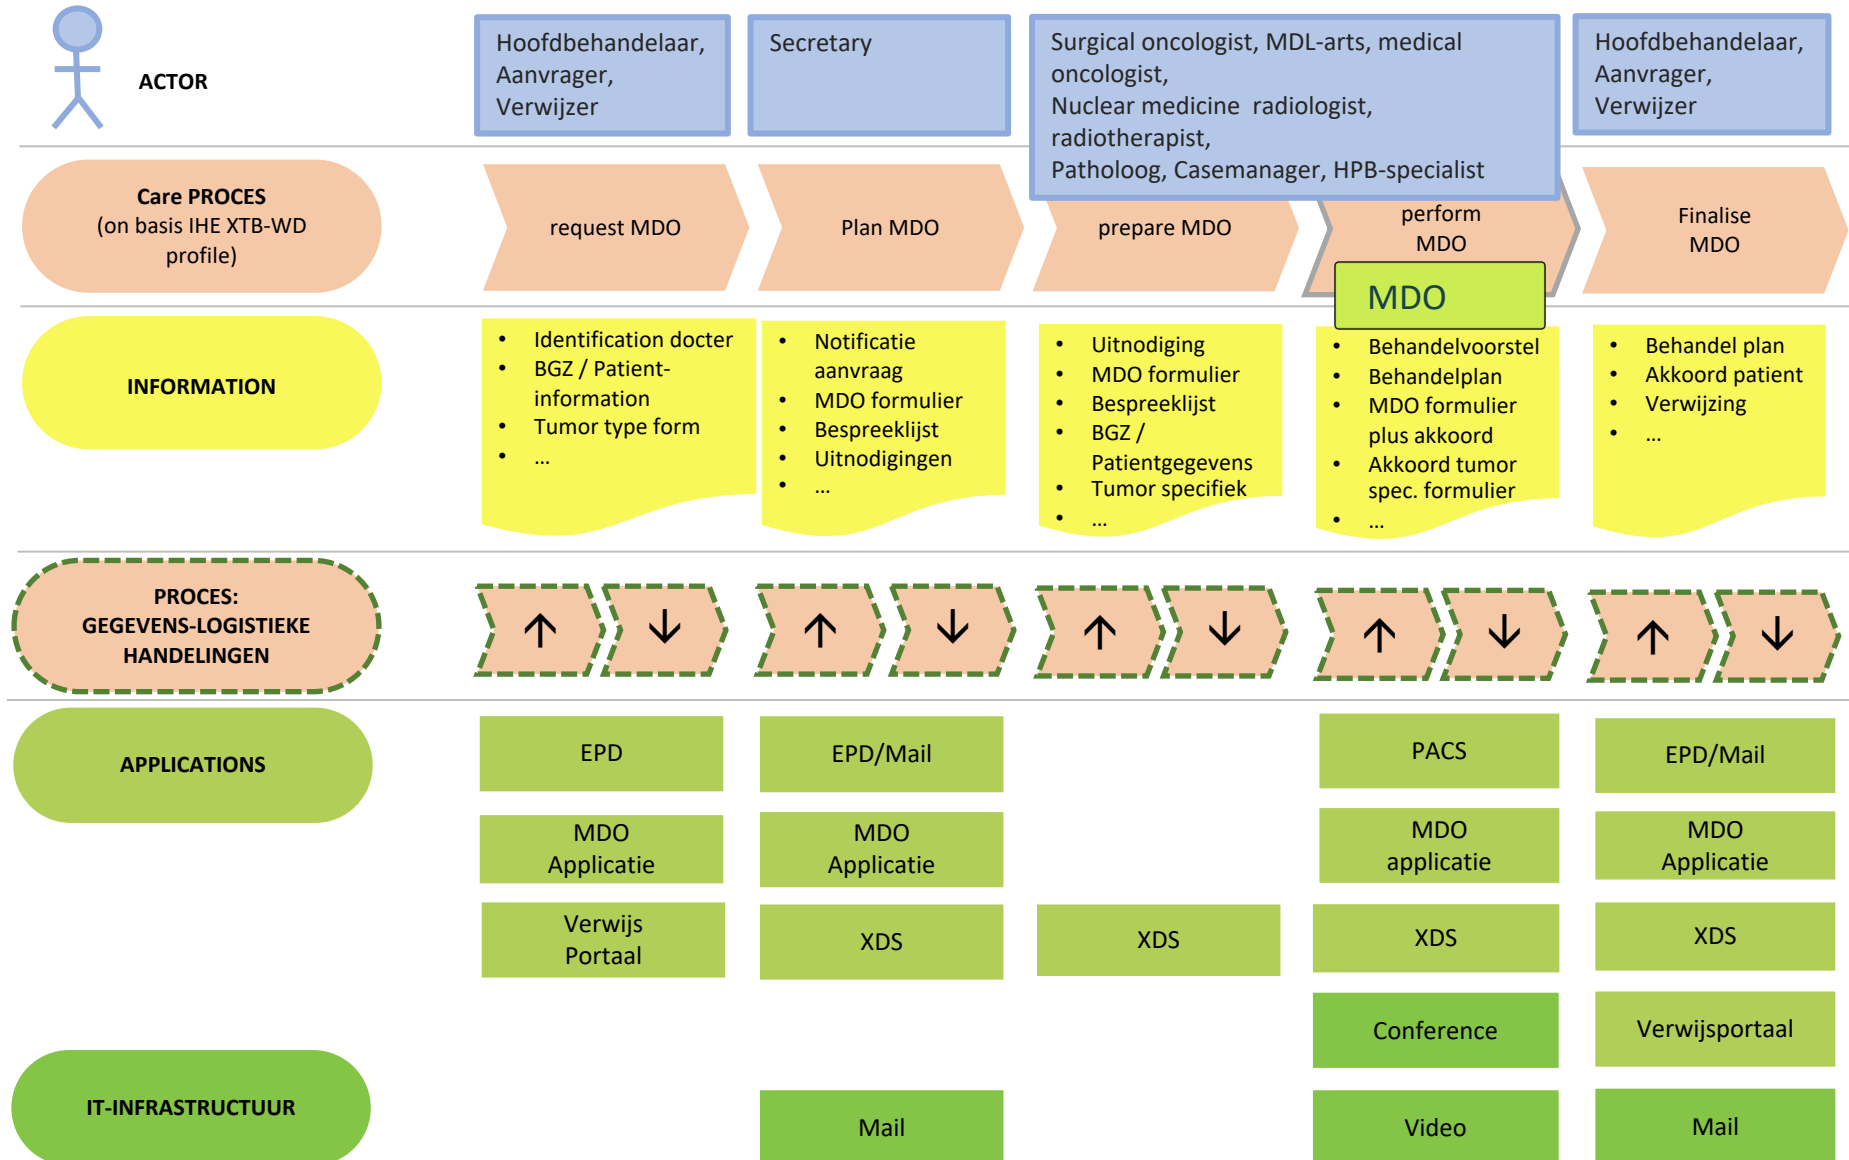

- To model complex healthcare processes with focus on information- and exchange-standards
- Short term
 - Gather and describe multidisciplinary processes between multiple organisations
- Mid term
 - Translate **generic** healthcare processes into (technical) implementation
- Long term
 - Knowledge Centre for Process- and ICT-professionals

- Primary focus on supporting healthcare professionals
- Healthcare process as starting point
- Healthcare process is leading for technical specs
- Outcome is not only focussed on IHE profiles, but on what is needed for the process
- Participants are Users (healthcare/IT professionals, public services, MoH) and vendors
 - Enterprise Architect MoH participated several sessions
 - Chair of the Working Group is on a hiring role at MoH

Tumour Board-proces (draft)

(based on IHE XTB-WD profile, inspired on MUMC case and projected on Nictiz interopermodel)

CARE PROCES

Workflow
IHE XTB-WD

INFORMATION

Information standards (semantics)
DCIM / (in Dutch BGZ)
Informationstandard Oncology (on basis of national guideline)

Template management
IHE Management of Radiology Report Templates
IHE Patient Care coordination profile

Documents (syntax)
Consultation NVvR, RSNA

APPLICATIONS

Dicom
FHIR, XML
IHE XDS / IHE BPPC (Public Health Repository – Cancer Registry)
IHE PRPH-Ca

APPLICATIONS

IHE ATNA

Workinggroup members

- Ulco de Boer (Beter Healthcare)
- Hans Buurman (IKNL Integraal Kankercentrum Nederland)
- Marlene Gigase (Positive Health Accelerator)
- Martin van Middelkoop (Roche Diagnostics)
- Vincent van Pelt (NICTIZ)
- Fokke Rispens (Visma Connect)
- Igor Schoonbrood (ITCAdvies en Maastricht Universitair Medisch Centrum+)
- Tie Tjee (Beter Healthcare en Vendor-chair IHE Nederland)
- Frans van Tilburg (M&I Partners, chair)

Handover IHE Guide Multidisciplinary Consultation Oncology to the NABON organisation

08 jul 2020

Interest of MoH

Dept. Information Policy

Manager Vendor Management

Presentation at MoH: Nabon, IHE, HL7

Now possibly national VIPP program: acceleration program

Interest of Health insurers (Zorgverzekeraars Nederland, ZN <https://www.zn.nl/about-zn>)

The umbrella organization of ten health insurers in The Netherlands

ZN awarded a subsidy to a regional MDO project with the restriction that the project must use the IHE Guide!

Some health insurers are considering to buy in healthcare services which are proven interoperable

Efficiency

Quality

Transparency

Healthcare professionals

Were very happy with the help of IHE, they felt supported, so they can focus on their job

Better understand

- the role of IHE

- their role towards the vendors

- their knowledge gap on interoperability

Southern region is going to use the IHE guide for the next
Oncology domain (80% reusable)

Strategy for MoH

MoH selected 13 priority use cases out of 45

Wants to put them in a new law

Has not one approach for use cases yet

Gave MoH the insight that they need to build national interoperability based on a series of use cases

But MoH must use one approach > IHE!?

IHE proof 1: Regional MDO Oncology use case

IHE proof 2: Regional Laboratory use case

Positioning IHE on the basis of the next questions to MoH

Who is going to do the governance about this Guide? Version management

Who should have a role in the governance?

- IHE Working group Care Processes?

 - Volunteers...

 - Workload and impact needs formal role and budget

National Academy of Medicine - Procuring interoperability

https://nam.edu/wp-content/uploads/2018/10/Procuring-Interoperability_web.pdf

When it comes to procuring digital services for health and health care systems, **interoperability is simply not yet an effectively structured component of either the supply or the demand equations, nor of the links between the two.**

In contrast to many other industries, **the purchasers of health care technology have not fully leveraged their individual or collective purchasing power to require interoperability from the health technology marketplace.**

With better procurement practices, supported by the **establishment of shared interoperability platform and architecture**, health care systems can prepare themselves to advance much more rapidly into the person- centric health care environment of the future.
