

## Plugathon for EHDS Primary Usage

Monday 23 - Wednesday 25

### Description:

A hands-on session focused on testing European Implementation Guides for the EHDS primary use of data (IPS, Imaging, Laboratory, HDR). Participants will validate EU project test cases, work directly with experts to resolve technical issues, and strengthen their understanding of interoperability tools. The session is ideal for technical teams and vendors preparing for EHDS-aligned integration and results in concrete feedback reports and verified implementations.

### Participants Will:

- Gain hands-on experience testing European Implementation Guides relevant to the EHDS primary use of data, including IPS, Imaging, Laboratory, and HDR specifications.
- Validate and troubleshoot test cases from major EEHRxF European projects, such as the EUDI Wallet and the Yellow Button functionalities.
- Interact directly with experts from IHE-Europe, national programmes, and EU projects to resolve technical issues and better understand integration pathways.
- Strengthen their practical understanding of interoperability tools (e.g., Gazelle) and profiles used for real-world implementation.

### Target Audience:

- Technical teams from EU-funded projects preparing for EHDS-aligned testing or integration (Wallet, MyHealth@EU, Yellow Button, etc.).
- Health IT vendors and developers wanting to test their solution against the European IGs and Project test cases
- Anyone looking to deepen their operational understanding of EHDS primary data use through hands-on, expert-supported testing

### Intended Output:

- Technical feedback reports for each participant/team, identifying successes, gaps, and areas for improvement.
- Verified implementations of European IGs and selected EU project test cases, contributing to alignment across countries and vendors.
- Strengthened collaboration between implementers, national teams, and EU projects working toward a harmonised primary use framework.

Don't miss this exceptional educational and testing experience, offering participants a platform to:

Learn and share valuable experiences in healthcare interoperability.

Innovate by creating real-time, on-the-fly connections using standardized APIs.

Collaborate with leading experts and a vibrant community of health IT professionals.
