

Plugathon for openEHR

Description:

A two-day track dedicated to exploring the role of **openEHR** as a complementary standard in the IHE ecosystem. This activity will provide a space to evaluate how openEHR-based systems can support and extend their capabilities via selected IHE Profiles, particularly in the context of structured health data access, persistence, and secondary data use.

Participants will:

- Examine selected projects leveraging openEHR for structured clinical data management.
- Participate in interactive technical sessions aimed at validating openEHR-based solutions against IHE interoperability frameworks.
- Explore concrete use-cases where openEHR can enhance or integrate with profiles.
- Discuss pathways for potential updates or supplements to IHE profiles that include openEHR-based options for data persistence and retrieval.

Who should attend:

- Companies and organizations implementing or evaluating openEHR-based platforms.
- Vendors and developers working on IHE-compliant solutions interested in exploring openEHR integration.
- National and regional health data infrastructure teams preparing for broader adoption of open, semantically rich clinical repositories.

Intended output:

- Shared understanding of how openEHR can complement selected IHE profiles.
- Expertise exchange across implementers and national initiatives using openEHR.
- Documented use-cases and preliminary mapping of integration points between IHE profiles and openEHR standards, identifying opportunities and gaps for future profile evolution.

Track will be facilitated by openEHR and IHE SMEs

Don't miss this exceptional educational and testing experience, offering participants a platform to:
Learn and share valuable experiences in healthcare interoperability.
Innovate by creating real-time, on-the-fly connections using standardized APIs.
Collaborate with leading experts and a vibrant community of health IT professionals.
